

# Mystery Salt Shaker

See sketches

## Step 1 - Hollow body

1. Mount body blank in chuck.
2. Rough shape outside.
3. Drill depth hole.
4. Hollow
5. Cut recess to accept funnel (dimension A)

## Step 2 - Shape funnel

1. Mount funnel blank in chuck.
2. Reduce diameter to slightly greater than dimension A.
3. Rough shape funnel.
4. Using the body as a guide, reduce the diameter of the funnel bottom so there is a snug fit with the step in the body bottom. The depth of the funnel bottom should be a little longer than the depth of the step.
5. Finish shaping funnel to desired length and make a 3/8 inch cup in funnel top.
6. Drill 7/64 or 1/8 inch in funnel.
7. Part off funnel.

## Step 3 - Shape funnel interior

1. Mount body in chuck jaws.
2. Insert funnel into body (needs to be snug enough fit to hollow funnel, but not so tight one can not remove finished funnel).
3. Hollow/shape funnel interior.
4. Remove funnel from body (compressed air in the hole usually pops the funnel out).

## Step 4 - Shape body

1. Place the body in expansion jaws.
2. Turn away the waste wood and shape the body top.
3. Sand and decorate the body as desired.
4. Glue the funnel in place to finish
5. Fill with salt and enjoy your Mystery Salt Shaker.
